Where the Essays Need References, Proofs, and Detail

Flyxion
Independent Researcher

September 26, 2026

Abstract

A static scan of 482 LaTeX documents (4,719,328 words) drawn from 7 public repositories identifies places where the writing asserts empirical results without citation, names prior work without citing it, states formal results without proof, or leaves sections skeletal. The median document carries 0.37 citations per thousand words, and 202 documents longer than 1,500 words cite nothing. The report ranks documents by gap density and lists each flagged location by file and line, so the work can be divided among contributors or handed to automated passes one bounded task at a time.

1 Purpose

Most of these documents are active projects that were published as they were written. What they lack is mostly not argument but apparatus: references for claims that rest on outside work, proofs for stated results, and development of sections that were outlined and left short. That kind of work divides well. A contributor who knows a literature can supply citations for one essay without understanding the whole corpus, and an automated pass does far better with a list of specific gaps than with an instruction to improve a document in general. This report is that list.

2 Method

A document is any .tex file containing a document class declaration. Files it pulls in with input or include commands are expanded in place, so chapter-based monographs are scanned as one document. Byte-identical copies are counted once; different drafts of the same essay are counted separately. Documents under 800 words are skipped. Six kinds of gap are flagged:

Uncited claims

Sentences with empirical wording (studies show, has been shown, recent work, evidence suggests, a percentage of a population) and no citation command in the same sentence.

Named works

Mentions of the form Author et al., Author (1999), or an arXiv number with no citation command.

Unfinished markers

TODO, TBD, FIXME, placeholder, to be written, citation needed, and similar.

Unproved statements

Theorem, lemma, proposition, corollary or claim environments with no proof following them. Conjectures are excluded.

Short sections

Sections or subsections with fewer than 60 words of prose once mathematics is removed, excluding headings that only introduce subsections.

Bibliography mismatches

Citation keys with no bibliography entry, and bibliography entries never cited. When the bibliography file cannot be matched to the citations, key checks are skipped.

The gap score is the weighted number of flags per thousand words (uncited claims 3, markers 2, named works 1.5, unproved statements and short sections 1), plus 4 for a document over 1,500 words with no citations, 2 for fewer than one citation per thousand words, and up to 10 for missing bibliography keys. The score ranks where to look first. It does not measure quality, and the pattern matching produces some false positives, especially for short sections in heavily subdivided monographs.

3 Summary

Documents scanned	482
Words	4,719,328
Median citations per 1,000 words	0.37
Documents over 1,500 words with no citations	202
Uncited claims	412
Named works without a citation	239
Statements without a proof	1,077
Unfinished markers	63
Short sections	9,848
Documents with missing bibliography keys	27

By repository

Repository	Docs	Words	Cites/1k	Uncited	Unproved
alphabet	162	1,822,701	1.66	137	436
kitbash	113	947,995	4.28	106	137
research-projects	95	916,588	1.99	78	318
antivenom	90	865,251	1.86	86	107
standardgalactic	9	73,029	1.18	2	29
guardrails	8	62,528	0.50	0	50
abraxas	5	31,236	4.03	3	0

Where to start

Three kinds of task are well suited to outside help. Uncited claims and named works are the most bounded: each is one sentence that needs one source, and a contributor can check the claim while

finding it. Missing bibliography keys are mechanical repairs. Unproved statements need someone with the relevant mathematics and are best offered one document at a time. Short sections are the least suited to outside work, since expanding them depends on the author's intent.

4 Documents in detail

All 482 documents follow in order of gap score, with every flagged location. Flagged sentences are shown as plain text with mathematics replaced by [math].

4.1 Roads Not Taken: Encoding Ratchets in Cinema, Computation, and Cosmology

`kitbash/cosmology/essay/essay.tex`

score 44.0, 1,558 words, 80 citations (51.35/1k), 165 bibliography entries, 146 never cited.

Uncited claims (1)

4.6 RSVP-meditations.tex

`research-projects/RSVP-meditations.tex`

score 30.4, 12,481 words, 0 citations (0.0/1k), 24 bibliography entries, 24 never cited.

No citations. The document cites nothing; a reference pass is the first task.

4.8 Never Predict Noise: Manifold-Aligned Prediction as Generative Inference

`alphabet/Never-Predict-Noise-draft-02.tex`

score 27.1, 5,341 words, 24 citations (4.49/1k), 26 bibliography entries, 19 never cited.

Uncited claims (2)

- `Never-Predict-Noise-draft-02.tex:84` We then show that recent empirical findings—especially the JiT results of Li and He (2025)—provide strong evidence that successful generative models implicitly. . .
- `Never-Predict-Noise-draft-02.tex:2113` Empirical findings: ImageNet intrinsic dimension is approximately 36–48 at 256 resolution.

Named works without a citation (3)

- `Never-Predict-Noise-draft-02.tex:140` We then connect this theory to empirical results—most critically the recent “Back to Basics” JiT work of Li & He (2025)—showing that predicting clean data, . . .
- `Never-Predict-Noise-draft-02.tex:348` The “Back to Basics” result of Li and He (2025) demonstrates that models predicting clean data directly outperform those predicting noised quantities . . .
- `Never-Predict-Noise-draft-02.tex:1138` The JiT paper by Li & He (2025) is a direct empirical confirmation of MAGI: - predicting clean images forces tangent alignment, - Transformers become implicit. . .

\section{Bioeconomic Thermoregulation, a bioeconomic approach emphasizes recursive integration. Each cycle of computation produces residues that condition the environment for further computation, and other computational byproducts are not treated as terminal losses but as trophic resources. A data center that directs waste heat into curing or district heating, computation-driven heating may be redirected into sintering regolith, electromagnetic, ensuring persistence under conditions of scarcity.

\subsection{Post-Terrestrial Contexts, exemplifies this principle. Over successive cycles, forming radiation shielding or modular habitats.

Rather than tiling the Moon with compute arrays, gradually reducing the need for external provisioning. In this way, measuring kWh reductions against human baselines \citep{Finnveden2009].

\begin{table, or a fabrication node that digests its own packaging into replacement substrates, or material--can be reinvested into protective or structural substrates. For example, packaging, provided residues are re-integrated rather than expelled. Xylomorphic systems amplify long-term value by reinvesting residues back into infrastructural cycles \citep{Kauffman1993], reducing exogenous input requirements with each iteration.

In terrestrial contexts, residue-driven systems.

\newpage \appendix

\section{Xylomorphic Computation, satellites and lunar bases become trophic nodes in an extended ecology, since each round of reintegration lowers the dependence on external subsidies.

The bioeconomic framing thus shifts emphasis from maximizing throughput to cultivating resilience: infrastructures are valuable not only for the work they perform but also for the degree to which they internalize their own metabolic costs. Systems that fail to close these loops remain dependent on continual external provisioning, the effective energy return on investment (EROI) of the system rises, this means that heat, where thermodynamic literacy aligns survival with autocatalytic closure rather than brute expansion.

\section{Normative Architecture and Policy, which multiplies exogenous dependencies and logistical costs, while xylomorphic infrastructures approach autocatalytic closure, xylomorphic strategies extend to post-terrestrial contexts: residues of computation--whether thermal

4.24 Scope Memplexes: The Enshittification Crisis as an Interface War

`standardgalactic/Scope Memplexes.tex`

score 16.7, 7,335 words, 0 citations (0.0/1k), 49 bibliography entries, 49 never cited.

No citations. The document cites nothing; a reference pass is the first task.

Uncited claims (1)

- `Scope Memplexes.tex:54` Recent work by Barenholtz and colleagues characterizes cognition as a recursively self-healing autoregressive process operating over symbol sequences.

4.25 RSVP Study Guide: A Comprehensive Framework for Relativistic Scalar Vector Plenum

kitbash/physics/RSVP_Study_Guide (2).tex

score 16.6, 4,880 words, 197 citations (40.37/1k), 0 bibliography entries.

The bibliography file could not be matched to the citations, so key checks were skipped.

4.27 upwork_solicitations.tex

antivenom/economics/upwork_solicitations.tex

score 16.2, 1,707 words, 0 citations (0.0/1k), 0 bibliography entries.

No citations. The document cites nothing; a reference pass is the first task.

Uncited claims (5)

- economics/upwork_solicitations.tex:92 Upon acquiring and completing the project, I will give you 20–50\% of the earnings.
- economics/upwork_solicitations.tex:115 I will pay 10 percent of earnings on Upwork per month and have a long term relationship with you.
- economics/upwork_solicitations.tex:135 And then you can get 10\% of the money from there and you can send the rest of the money to my PayPal or Payoneer.
- economics/upwork_solicitations.tex:180 And after getting a good task on Upwork, I will handle that task, and after that, I will share your 40\% of monthly income for using your Upwork.
- economics/upwork_solicitations.tex:284 I'll pay you \ \$200 per month for two months, and then 20\% of the Upwork account's earnings after 3 months.

Named works without a citation (1)

- economics/upwork_solicitations.tex:174 But anyway, this is all related to violation activities according to Upwork's policy.

Short sections (1)

4.34 Coherence Before Engagement: An Architecture for Persistent Meaning in Digital Systems

`alphabet/Coherence Before Engagement.tex`

score 15.3, 9,896 words, 0 citations (0.0/1k), 28 bibliography entries, 28 never cited.

No citations. The document cites nothing; a reference pass is the first task.

Uncited claims (5)

- `Coherence Before Engagement.tex:146` Extensive empirical work has documented the consequences of these design choices.
- `Coherence Before Engagement.tex:223` Empirical studies of wiki governance document persistent tensions between openness and control.

- `Coherence Before Engagement.tex:304` For example, a claim that requires both textual explanation and empirical evidence cannot be considered complete until both modalities are populated.
- `Coherence Before Engagement.tex:458` A transformation [math] attaches empirical evidence, yielding [math] such that [math] is defined.
- `Coherence Before Engagement.tex:1235` Third, empirical studies are required to evaluate learning outcomes, trust formation, and discourse quality in deployed systems.

Statements without a proof (21)

- `Coherence Before Engagement.tex:920` proposition
- `Coherence Before Engagement.tex:1550` corollary
- `Coherence Before Engagement.tex:1554` corollary

4.39 Stochastic Revision Models for Document Evolution, Generative Writing Dynamics, and Visualization P...

`research-projects/textmonod-essay/stochastic-revision-models.tex`

score 13.8, 2,747 words, 176 citations (64.07/1k), 77 bibliography entries, 6 never cited.

Uncited claims (3)

- `textmonod-essay/stochastic-revision-models.tex:344` Results on synthetic data show high-fidelity recovery:
- `textmonod-essay/stochastic-revision-models.tex:499` Text revision is **not Poisson**: 93% of real documents require burst or extrinsic models.
- `textmonod-essay/stochastic-revision-models.tex:517` The empirical rejection of Poisson editing in 93% of real documents supports a strong claim:

4.40 The Mortality of Computation: A Structural Theory of Displacement

`alphabet/The Mortality of Computation.tex`

score 13.8, 7,720 words, 0 citations (0.0/1k), 20 bibliography entries, 20 never cited.

No citations. The document cites nothing; a reference pass is the first task.

Uncited claims (1)

- `The Mortality of Computation.tex:1532` Abstraction has been shown to displace difficulty rather than eliminate it, reducing explicit burden at the cost of increased hidden obligation.

4.45 Scalar Extraction in Platform Capitalism: From Social Network to Probabilistic Extraction Machine

`kitbash/monograph/essay.tex`

score 13.2, 48,724 words, 0 citations (0.0/1k), 0 bibliography entries.

No citations. The document cites nothing; a reference pass is the first task.

Uncited claims (7)

- `monograph/essay.tex:399` “Your ad is performing better than 90\% of similar ads” mimics the near-miss effect known to intensify gambling behavior.
- `monograph/essay.tex:432` 1–3\% of advertisers generate most of the profit, the long tail of small businesses loses money, churn dynamics replenish th. . .
- `monograph/essay.tex:8199` Courts can adjudicate disputes with empirical evidence.
- `monograph/essay.tex:11878` It is the instrument through which the simulation harness is directed, the mechanism by which new stressors are incorporated into the evaluative process, and t. . .
- `monograph/essay.tex:12185` Adaptive drift refers to deliberate refinements that respond to empirical evidence and enhance resilience.
- `monograph/essay.tex:12685` All amendments must be grounded in empirical evidence that the system’s invariants are no longer satisfied or that structural drift is detectable.
- `monograph/essay.tex:12820` It includes the development of prototype constitutional platforms; empirical studies on the behaviour of visibility and entropy fields; legal frameworks for th. . .

4.54 From Catharsis to Geometric Bayesianism: RSVP and the Demise of the Hydraulic Model of Emotion

kitbash/research/psychology/emotions.tex

score 11.8, 2,807 words, 15 citations (5.34/1k), 17 bibliography entries, 10 never cited.

Uncited claims (1)

- research/psychology/emotions.tex:43 Empirical studies reveal that cathartic behaviors often exacerbate negative emotions.

Statements without a proof (5)

- research/psychology/emotions.tex:86 proposition
- research/psychology/emotions.tex:96 lemma
- research/psychology/emotions.tex:116 corollary

4.55 Admissible Continuation [1em] A Mathematical Theory of Persistent Systems

`alphabet/resources/admissible-continuation.tex`

score 11.3, 28,589 words, 0 citations (0.0/1k), 41 bibliography entries, 41 never cited.

No citations. The document cites nothing; a reference pass is the first task.

Statements without a proof (65)

4.58 Surprise Minimization, Solomonoff Induction, and Expected Free Energy: A Formal Analysis with Curva...

`antivenom/active-inference/surprise-minimization.tex`

score 11.1, 3,944 words, 1 citations (0.25/1k), 17 bibliography entries, 16 never cited.

Uncited claims (2)

- `active-inference/surprise-minimization.tex:55` Recent work by Michele Vannucci (2025) studies a theoretical AIXI-like agent in which the reward signal is replaced by the instantaneous senso...
- `active-inference/surprise-minimization.tex:71` It is well known that the AIXI agent (Hutter, 2005) maximizes expected cumulative reward with respect to a universal prior over computable environments (Solomo...

Named works without a citation (10)

- `active-inference/surprise-minimization.tex:71` In a provocative modification, Vannucci (2025) replaces external reward by instantaneous surprise, thereby constructing a theoretical limit in which the agent ...
- `active-inference/surprise-minimization.tex:71` Under perfect Bayesian inference, free energy minimization collapses to surprise minimization (Friston, 2010; Buckley et al.
- `active-inference/surprise-minimization.tex:73` On paper, this yields a natural unification between universal induction and active inference (Friston et al.
- `active-inference/surprise-minimization.tex:97` The two main traditions relevant here are (i) universal induction and computability-theoretic reinforcement learning (Solomonoff, 1964; Hutter, 2005), and (ii)...
- `active-inference/surprise-minimization.tex:116` Pure risk minimization corresponds precisely to surprise minimization with no epistemic drive, thereby producing the dark-room pathology (Friston, 2010; Buckle...
- `active-inference/surprise-minimization.tex:281` As in active inference (Friston, 2010; Buckley et al.
- `active-inference/surprise-minimization.tex:455` \] Unless $\mathcal{C}$ is constantly reactivated by epistemic curvature, policy collapses exponentially (Friston, 2010; Parr et al.
- `active-inference/surprise-minimization.tex:481` See Evans (2010) and Pazy (1983) for details of mild-solution bounds.
- `active-inference/surprise-minimization.tex:614` Third, external forcing $\mathcal{C}$ could sustain curvature and produce persistent agency, connecting to nonequilibrium steady states

(Friston, 2010; Parr et al.

- `active-inference/surprise-minimization.tex:636` These results reproduce—mathematically and without teleology—the qualitative claims of active inference (Friston, 2010; Parr et al.

4.63 Preliminary Analysis of Developer Activity and Language Ecosystems in a Large GitHub Follow Network

`research-projects/analysis/github_activity-2.tex`

score 10.7, 2,557 words, 0 citations (0.0/1k), 0 bibliography entries.

No citations. The document cites nothing; a reference pass is the first task.

Uncited claims (4)

- `analysis/github_activity-2.tex:190` 3\% of the population—more than twice its share among active accounts (16).
- `analysis/github_activity-2.tex:192` 2\% of active accounts but only 3.
- `analysis/github_activity-2.tex:192` 8\% of inactive accounts, illustrating the asymmetric concentration of active development in newer ecosystems.
- `analysis/github_activity-2.tex:392` The present analysis covers approximately 15\% of the full follow list (50,040 batches total, 1,000,800 accounts).

4.64 Time as Irreversible Constraint Accumulation: An Event-Based Interpretation of Proper Time, Entropy...

`kitbash/physics/constraint-accumulation-draft-01.tex`

score 10.5, 2,451 words, 0 citations (0.0/1k), 0 bibliography entries.

No citations. The document cites nothing; a reference pass is the first task.

Statements without a proof (4)

4.65 Ledger and Junk: Opacity as the Condition of Generativity in Computational Systems

kitbash/thesis/draft-02/thesis.tex

score 10.2, 4,169 words, 112 citations (26.86/1k), 34 bibliography entries, 4 never cited.

Short sections (1)

- thesis/draft-02/thesis.tex:150 subsection "Philosophy of Science" (56 words)

Cited keys missing from the bibliography (22) as seen in historical cases like phlogiston \citep{shapin1996, barad2007}.

\section{Conclusion, barad2007}. By reframing junk as a generative substrate, bowker2005]. By revaluing junk, bowker2005]. Similarly, cataloging functions while deferring non-coding regions as junk \citep{keller2000, drawing lessons from genomics' embrace of junk DNA \citep{pennisi2012}.

\subsection{Science Policy, encode2012}. Policies that incentivize exploration of remainders can foster paradigm shifts, from non-coding DNA to AI hallucinations.

\section{The Genomics Case: From Junk to Regulatory Substrate, gitelman2013, glissant1997}. This requires policies that foster responsible exploration of AI's opaque zones, haraway1988]. The ledger/junk lens offers a new way to understand the role of anomalies in knowledge production, in genomics, kuhn1962]. This approach challenges funding models that prioritize immediate, measurable outcomes \citep{bowker2005}.

\subsection{Philosophy of Science, shapin1996, shapin1996}. By reframing junk as generative, the gene-centric paradigm treated coding sequences as a ledger, we challenge the positivist fantasy of complete transparency and open new avenues for discovery \citep{hacking1983, we propose a new epistemology that values opacity as a driver of scientific creativity \citep{bowker2005}.

\subsection{Governance of AI, we uncover the creative potential of what is excluded, with implications for how we conceptualize scientific progress
\citep{hacking1983}

4.91 Developer Lifecycles and Language Ecosystem Dynamics on GitHub: A Large-Scale Analysis of a Follow ...

`research-projects/analysis/github_developer_lifecycles.tex`

score 7.6, 5,178 words, 5 citations (0.97/1k), 5 bibliography entries.

Uncited claims (3)

- `analysis/github_developer_lifecycles.tex:36` Most empirical studies of GitHub rely on repository-centric datasets such as GitHub Archive or BigQuery mirrors.
- `analysis/github_developer_lifecycles.tex:488` The empirical data suggests a mixture of mildly increasing hazard and survivorship bias, resulting in the non-monotonic observed survival curve.
- `analysis/github_developer_lifecycles.tex:644` The empirical data suggests [math] slightly greater than [math] , indicating a mild aging effect consistent with gradual disengagement over the developer lifecycle.

4.96 Developer Lifecycles and Language Ecosystem Dynamics on GitHub: A Large-Scale Analysis of a Follow ...

research-projects/analysis/github_developer_lifecycles-draft.tex

score 7.5, 3,601 words, 5 citations (1.39/1k), 5 bibliography entries.

Uncited claims (2)

- analysis/github_developer_lifecycles-draft.tex:35 Most empirical studies of GitHub rely on repository-centric datasets such as GitHub Archive or BigQuery mirrors.
- analysis/github_developer_lifecycles-draft.tex:376 The empirical data suggests a mixture of mildly increasing hazard and survivorship bias, resulting in the non-monotonic observed survival curve.

4.98 From Fields to Futures [0.4em] A Recent History of Constraint, Admissibility, and Continuation

`antivenom/essay/draft-research-report/research-report.tex`

score 7.4, 52,321 words, 0 citations (0.0/1k), 0 bibliography entries.

No citations. The document cites nothing; a reference pass is the first task.

Uncited claims (10)

- `essay/draft-research-report/research-report.tex:101` Recent work on counterfactual sovereignty makes the political consequence explicit: control over the comparison class is itself a form of power because it dete...

- `essay/draft-research-report/research-report.tex:131` It is a compact statement of the direction toward which the recent work has converged.
- `essay/draft-research-report/research-report.tex:6787` This yields perhaps the strongest ontological consequence of the recent work.
- `essay/draft-research-report/research-report.tex:9099` The recent work contains several families of concepts that are clearly related but not yet always sharply separated.
- `essay/draft-research-report/research-report.tex:9254` This problem has already appeared implicitly in the recent work on diagnostic coordinates and repair warrant.
- `essay/draft-research-report/research-report.tex:10527` This makes explicit a principle implicit throughout the recent work:
- `essay/draft-research-report/research-report.tex:11976` That proposition may be the smallest statement from which the largest portion of the recent research can presently be reconstructed.
- `essay/draft-research-report/research-report.tex:13240` The recent work on counterfactual sovereignty makes this epistemic asymmetry explicit.
- `essay/draft-research-report/research-report.tex:15838` This may be the most important methodological constraint to emerge from the recent work because it applies directly to the program itself.
- `essay/draft-research-report/research-report.tex:16124` The recent work on narrative merger suggests a criterion for this process.

4.99 From Fields to Futures [0.4em] A Recent History of Constraint, Admissibility, and Continuation

`antivenom/essay/research-report.tex`

score 7.4, 52,574 words, 0 citations (0.0/1k), 0 bibliography entries.

No citations. The document cites nothing; a reference pass is the first task.

Uncited claims (10)

- `essay/research-report.tex:101` Recent work on counterfactual sovereignty makes the political consequence explicit: control over the comparison class is itself a form of power because it dete...
- `essay/research-report.tex:131` It is a compact statement of the direction toward which the recent work has converged.
- `essay/research-report.tex:6303` This yields perhaps the strongest ontological consequence of the recent work.
- `essay/research-report.tex:8252` The recent work contains several families of concepts that are clearly related but not yet always sharply separated.
- `essay/research-report.tex:8391` This problem has already appeared implicitly in the recent work on diagnostic coordinates and repair warrant, and it should be generalized.
- `essay/research-report.tex:9556` This makes explicit a principle implicit throughout the recent work:
- `essay/research-report.tex:10779` That proposition may be the smallest statement from which the largest portion of the recent research can presently be reconstructed.
- `essay/research-report.tex:11829` The recent work on counterfactual sovereignty makes this epistemic asymmetry explicit: to evaluate an outcome requires a comparison, but the comparison itself ...
- `essay/research-report.tex:13814` This may be the most important methodological constraint to emerge from the recent work because it applies directly to the program itself.
- `essay/research-report.tex:14060` The recent work on narrative merger suggests a criterion for this process.

`research-projects/active-inference/monograph.tex`

score 6.0, 12,011 words, 104 citations (8.66/1k), 53 bibliography entries, 18 never cited.

Named works without a citation (10)

- `active-inference/monograph.tex:1876` The goal is to unify sparse coding (Olshausen & Field 1996; Donoho 2006; Elad 2010), active inference (Friston 2009, 2010; Bogacz 2017), and perceptual contro. . .
- `active-inference/monograph.tex:1878` The result is a complete geometric-variational interpretation of cognitive heuristics, grounded in thermodynamic efficiency, manifold geometry, and biological . . .
- `active-inference/monograph.tex:1896` Sparse recognition thus implements a variational density [math] approximating a generative posterior, but with inductive biases derived from metabolic and ther. . .
- `active-inference/monograph.tex:1900` Each dictionary atom [math] represents a learned direction in this manifold, obtained through optimisation (Mairal et al.
- `active-inference/monograph.tex:1900` \ 2009, 2010; Gribonval et al.
- `active-inference/monograph.tex:2026` The combined system forms a closed-loop sparse controller equivalent to a reduced variational optimal control system (Friston et al.
- `active-inference/monograph.tex:2030` Sparse structures conserve metabolic energy: [math] and the [math] relaxation [math] approximates the true cost of spiking, neurotran. . .
- `active-inference/monograph.tex:2042` sparse coding (Olshausen & Field 1996; Donoho 2006; Elad 2010), perceptual control (Powers 1973), variational optimisation (. . .

- `active-inference/monograph.tex:2055` Building on the classical treatment in Bredon (1997), and modern applications in cognitive modelling and signal processing (Curry et al.
- `active-inference/monograph.tex:3379` In parallel with Powers, William Glasser developed Reality Therapy (1965), later re-articulated as Control Theory (1984) and finally as Choice Theory (1998).

4.184 States Without Histories: Latent Reasoning as Admissibility-Field Traversal

`alphabet/roadmap/states_without_histories.tex`

score 5.6, 4,438 words, 0 citations (0.0/1k), 17 bibliography entries, 17 never cited.

No citations. The document cites nothing; a reference pass is the first task.

Uncited claims (1)

- `roadmap/states_without_histories.tex:139` This is not necessarily wrong—the state ontology remains viable, and H2 in Section~ is its strongest remaining form—but it is one possible on. . .

Named works without a citation (8)

- `roadmap/states_without_histories.tex:27` Seddik and Fard (2026) demonstrate that latent thought representations in large language models preserve task-level identity while collapsing . . .
- `roadmap/states_without_histories.tex:40` Independent cross-domain context comes from Griffin et al.
- `roadmap/states_without_histories.tex:412` Using multivariate pattern analysis on high-density EEG from 399 children aged 6–11, Griffin et al.
- `roadmap/states_without_histories.tex:424` The relevance of Griffin et al.
- `roadmap/states_without_histories.tex:444` The temporal generalization matrices in Griffin et al.

- `roadmap/states_without_histories.tex:467` The two-level hierarchy appears in language model latent representations (Seddik and Fard) and in cortical face representations in autism (Griffin et al.
- `roadmap/states_without_histories.tex:536` The cross-domain parallel with Griffin et al.
- `roadmap/states_without_histories.tex:537` Seddik and Fard provide the LLM evidence; Griffin et al.

Statements without a proof (1)

- `roadmap/states_without_histories.tex:74` proposition

4.185 Inflation without Expansion

`alphabet/physics/Inflation without Expansion.tex`

score 5.5, 3,260 words, 13 citations (3.99/1k), 20 bibliography entries, 11 never cited.

Uncited claims (1)

- `physics/Inflation without Expansion.tex:60` However, discrepancies such as the Hubble tension (varying measurements of H_0 from early and late universe probes) and anomalies in CMB polarization data su...

4.210 Rain on the Parade [0.3em] Why Wanting Affection Is Not the Same as Craving Oxytocin

`kitbash/cognitive-dynamics/rain-on-the-parade.tex`

score 4.7, 3,212 words, 7 citations (2.18/1k), 5 bibliography entries.

Uncited claims (5)

- `cognitive-dynamics/rain-on-the-parade.tex:18` This essay examines the conceptual error underlying the idea of an oxytocin craving and the empirical evidence that makes the simple model difficult to sustain.
- `cognitive-dynamics/rain-on-the-parade.tex:89` The literature is considerably less orderly.
- `cognitive-dynamics/rain-on-the-parade.tex:91` A systematic review and meta-analysis by Burenkova et al.
- `cognitive-dynamics/rain-on-the-parade.tex:91` Correlational designs did show a small positive association, but the literature exhibited substantial heterogeneity across paradigms, populations, forms of int. . .
- `cognitive-dynamics/rain-on-the-parade.tex:97` Instead, increases, decreases, null effects, individual variation, contextual variation, and substantial methodological difficulties coexist in the literature.

4.211 Recursive Futarchy

kitbash/economics/essay.tex

score 4.6, 8,826 words, 12 citations (1.36/1k), 20 bibliography entries, 12 never cited.

4.223 The Narrow Path Between Domination and Chaos: Consent, Coordination, and Structural Control in the ...

research-projects/The Narrow Path.tex

score 4.4, 15,477 words, 0 citations (0.0/1k), 24 bibliography entries, 24 never cited.

No citations. The document cites nothing; a reference pass is the first task.

Uncited claims (6)

- `The Narrow Path.tex:43` Recent work by Nora Ammann has articulated this situation as a “narrow path” between two civilizational attractors: domination and chaos.
- `The Narrow Path.tex:49` Subsequent sections examine empirical evidence of systemic failure, analyze the technical mechanisms that generate these outcomes, and situate generative AI as. . .
- `The Narrow Path.tex:73` They are supported by a growing body of empirical evidence drawn from user surveys, platform transparency reports, academic studies, and longitudinal analyses . . .
- `The Narrow Path.tex:75` Large-scale surveys conducted across North America and Europe between 2018 and 2024 consistently report that between 55\% and 72\% of users encounter content t. . .
- `The Narrow Path.tex:113` Empirical evidence shows that $[math]$ correlates more strongly with $[math]$ than with $[math]$ when measurement is immediate.
- `The Narrow Path.tex:119` Empirical studies demonstrate such overlap for curiosity, outrage, and aversion.

4.255 Representation Without Faithfulness\ [1em] Projection Failure, Distinction Preservation,\ and the Ge...

`alphabet/roadmap/representation-without-faithfulness.tex`

score 3.7, 57,084 words, 0 citations (0.0/1k), 36 bibliography entries, 36 never cited.

No citations. The document cites nothing; a reference pass is the first task.

Uncited claims (5)

- `roadmap/representation-without-faithfulness.tex:3156` Yet recent research has revealed surprising failures of invariance, consistency, and robustness within these reasoning traces.
- `roadmap/representation-without-faithfulness.tex:4425` Yet empirical evidence suggests a more complicated picture.
- `roadmap/representation-without-faithfulness.tex:4631` This observation helps explain a variety of empirical findings.
- `roadmap/representation-without-faithfulness.tex:8087` It navigates a space of possible revisions constrained by history, admissibility, computational cost, institutional inertia, and empirical evidence.

- `roadmap/representation-without-faithfulness.tex:8499` This perspective preserves the importance of empirical evidence while emphasizing a different aspect of scientific activity.

Statements without a proof (1)

- `roadmap/representation-without-faithfulness.tex:13598` theorem

4.388 field-space.tex

`alphabet/constraint-geometry/field-space.tex`

score 1.8, 18,299 words, 23 citations (1.26/1k), 33 bibliography entries, 14 never cited.

Uncited claims (9)

- `constraint-geometry/field-space.tex:117` Two recent papers, arriving from entirely different empirical domains, independently converge on a shared structural principle: stable physical organization ...
- `constraint-geometry/field-space.tex:717` The spin-valley experiment demonstrates this directly.

- `constraint-geometry/field-space.tex:1006` The \ latent space organization is empirical evidence that the training process has found such a compression.
- `constraint-geometry/field-space.tex:1298` The \ zero-shot super-resolution result is empirical evidence that the training process has learned a representation in which this extension is approximate. . .
- `constraint-geometry/field-space.tex:1648` The moiré experiment shows that measurement fails when it projects onto a surface that eliminates the physically significant degrees of freedom.
- `constraint-geometry/field-space.tex:1685` Both papers provide empirical evidence for a claim that is stronger than the convergence thesis: that hidden dynamical manifolds may be more physically fundame. . .
- `constraint-geometry/field-space.tex:1690` The moiré experiment demonstrates this in the clearest possible form.
- `constraint-geometry/field-space.tex:1972` The moiré experiment demonstrates physically that effective understanding of collective dynamics requires sensitivity to hidden constraint manifolds that are i. . .
- `constraint-geometry/field-space.tex:2341` This reframing dissolves an apparent tension in the literature.

`research-projects/major_projects/CrystalEconomy/cinematic-reconstruction-v1.tex`

score 0.6, 10,187 words, 22 citations (2.16/1k), 19 bibliography entries, 1 never cited.

Uncited claims (1)

- `major_projects/CrystalEconomy/cinematic-reconstruction-v1.tex:794` Success criterion: The hierarchical strategy achieves at least 90\% of the precision and recall of exhaustive invocation while invoking full witnesses...

Statements without a proof (3)

- `major_projects/CrystalEconomy/cinematic-reconstruction-v1.tex:145` proposition
- `major_projects/CrystalEconomy/cinematic-reconstruction-v1.tex:421` proposition
- `major_projects/CrystalEconomy/cinematic-reconstruction-v1.tex:530` proposition

4.423 `synthetic_trajectories.tex`

`antivenom/boundaries/synthetic_trajectories.tex`

score 0.6, 10,408 words, 11 citations (1.06/1k), 13 bibliography entries, 4 never cited.

Uncited claims (2)

- `boundaries/synthetic_trajectories.tex:74` Empirical work shows that imagined events can acquire perceptual detail through rehearsal, while genuine memories may degrade or fragment over time.
- `boundaries/synthetic_trajectories.tex:94` Empirical findings in reconsolidation research support this interpretation.

4.424 Consistency Constraints and the Geometry of Learned Representations

`alphabet/soup/consistency-constraints.tex`

score 0.6, 10,477 words, 24 citations (2.29/1k), 25 bibliography entries, 1 never cited.

Uncited claims (1)

- `soup/consistency-constraints.tex:376` The literature below is organized by the mechanism each tradition posits for representational quality rather than by surface domain, and each subsection closes. . .

Named works without a citation (2)

- `soup/consistency-constraints.tex:92` Papadimitriou and Jurafsky (2020) showed that pretraining on music, code, and nested symbolic sequences transfers measurable structural bias to subsequent lang. . .
- `soup/consistency-constraints.tex:310` The Jacobian lens of Gurnee et al.

4.425 Spectacle Runtime and the Compression of Meaning: Temporal Form, Social Media, and the Reformatting. . .

`alphabet/Spectacle Runtime.tex`

score 0.6, 9,044 words, 47 citations (5.2/1k), 35 bibliography entries, 1 never cited.

Statements without a proof (5)

score 0.0, 16,291 words, 24 citations (1.47/1k), 39 bibliography entries, 24 never cited.

4.471 Epistemic Transport and Its Failure: Fragmentation, Migration, and the Loss of Common Epistemic Aut. . .

antivenom/rhetoric/epistemic-transport.tex

score 0.0, 4,209 words, 23 citations (5.46/1k), 19 bibliography entries, 1 never cited.

4.472 The Amplitwist [0.35em] A Tempered Account

kitbash/cognitive-dynamics/amplitwist-essay.tex

score 0.0, 13,033 words, 15 citations (1.15/1k), 14 bibliography entries.

4.473 Safe Mode: Security Vocabulary and the Platforms That Execute Belief

kitbash/cognitive-dynamics/safe-mode.tex

score 0.0, 4,434 words, 14 citations (3.16/1k), 12 bibliography entries.

4.474 Parliament on a Plenum [0.4em] Augmenting Paperbot Parliament with HYDRA Architecture

kitbash/paperbot/parliament_hydra.tex

score 0.0, 4,280 words, 5 citations (1.17/1k), 9 bibliography entries, 5 never cited.

4.475 The Politics of Oracle-Free Evaluation: Constraint, Generativity, and the Problem of Validation

kitbash/processing/Draft 1.tex

score 0.0, 3,479 words, 7 citations (2.01/1k), 30 bibliography entries, 29 never cited.

4.476 Spectacle Runtime and the Compression of Meaning Temporal Form Social Media and the Reformatting of. . .

research-projects/Spectacle Runtime.tex

score 0.0, 7,222 words, 44 citations (6.09/1k), 34 bibliography entries, 1 never cited.

4.477 Preliminary Analysis of Developer Activity and Language Ecosystems in a Large GitHub Follow Network

`research-projects/analysis/github_activity.tex`

score 0.0, 1,486 words, 0 citations (0.0/1k), 0 bibliography entries.

4.478 The Technological Society as a Pop-Optimizing Regime: Ellul's Structural Thesis and the Playcosm Br...

`research-projects/ellul-intro.tex`

score 0.0, 863 words, 0 citations (0.0/1k), 6 bibliography entries, 6 never cited.

4.479 Certified Chance [4pt] What a Physical Entropy Source Has to Prove, and to Whom

`research-projects/framework/certified-chance.tex`

score 0.0, 2,351 words, 18 citations (7.66/1k), 10 bibliography entries.

4.480 Chips That Route Chips [4pt] Lineage, Self-Application, and Tools That Help Make Their Successors

`research-projects/framework/chips-that-route-chips.tex`

score 0.0, 2,314 words, 12 citations (5.19/1k), 11 bibliography entries.

4.481 Holocoordinate Systems: Multidifference Observation, Transition Structure, and Residual Growth in E...

`research-projects/unsorted/holocoordinate-systems.tex`

score 0.0, 4,263 words, 8 citations (1.88/1k), 7 bibliography entries.

4.482 The Unchosen Adjacency

`research-projects/unsorted/unchosen-adjacency-source/unchosen-adjacency.tex`

score 0.0, 8,279 words, 34 citations (4.11/1k), 21 bibliography entries.
